MicroSeq: Microsatellite Analysis

M. Bekritsky, J. Troge, D. Levy, M. Wigler, M. Schatz

- Highly variable simple sequence repeats
 - ...GCACACACACAT... = ...G(CA)₅T...
 - Mutate by slippage during replication, creating indels
 - High mutation rate makes it a useful marker for inferring phylogeny, associated with many diseases

↓ Profile

- Genotyping with MicroSeq:
 1. Rapidly detect MS in short reads
 2. Map reads using a new MS-mapper
 3. Analyze profiles across populations
- Currently looking at de novo mutations associated with autism

Scalpel: Haplotype Microassembly

G. Narzisi, D. Levy, I. Iossifov, J. Kendall, M. Wigler, M. Schatz

- Use assembly techniques to identify complex variations from short reads
 - Improved power to find indels
 - Trace candidate haplotypes sequences as paths through assembly graphs

Genomic Dark Matter

Hayan Lee, Michael Schatz

- Short read mapping is an essential for identifying mutations in the genome
 - Not every base of the genome can be mapped equally well, especially because of repeats
- Introduced a new probabilistic metric - the Genome Mappability Score - that quantifies how reliably reads can be mapped to every position in the genome
 - We have little power to measure 11-13% of the human genome, including of known clinically relevant variations
 - Errors in variation discovery are dominated by false positives, especially in low GMS regions

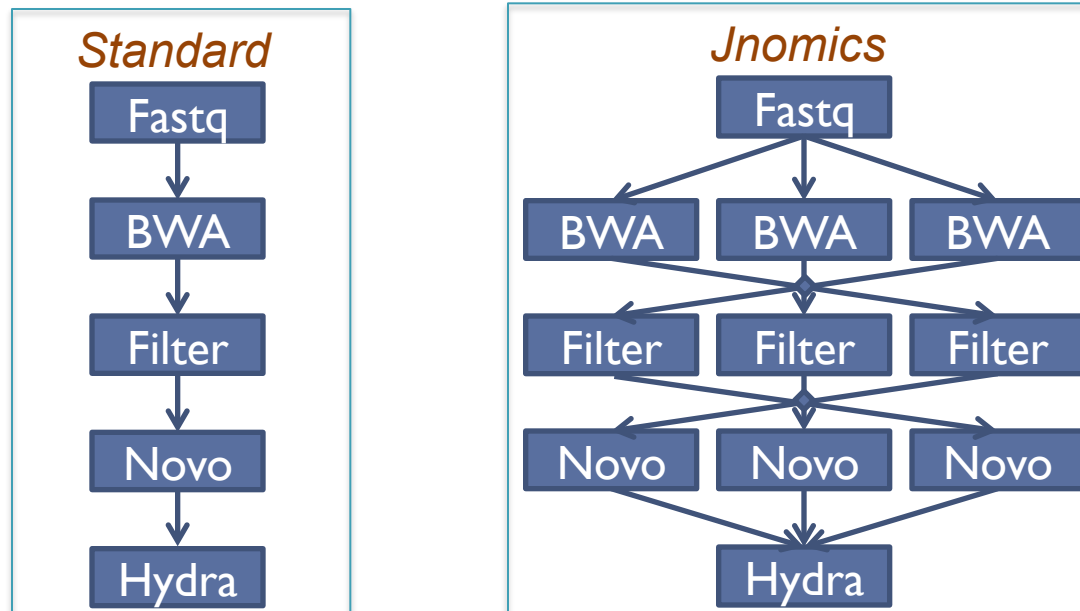

Species (build)	size	paired/single	whole (%)	transcription (%)
yeast (sc2)	12 Mbp	paired	94.85	95.04
		single	94.25	94.62
fly (dm3)	130 Mbp	paired	90.52	96.14
		single	89.70	95.94
mouse (mm9)	2.7 Gbp	paired	89.39	96.03
		single	87.47	94.75
human (hg19)	3.0 Gbp	paired	89.02	97.40

Pacific Biosciences RS

Single Molecule Real Time (SMRT) Sequencing

Imaging of fluorescent phospholinked labeled nucleotides as they are incorporated by a polymerase anchored to a Zero-Mode Waveguide (ZMW).

Time

http://www.pacificbiosciences.com/assets/files/pacbio_technology_background.pdf

SMRT Read Types

- **Standard sequencing**
 - Long inserts so that the polymerase can synthesize along a single strand
- **Circular consensus sequencing**
 - Short inserts, so polymerase can continue around the entire SMRTbell multiple times and generate multiple sub-reads from the same single molecule.
- **Strobe sequencing**
 - Very long inserts, alternate the lasers in the instrument between on and off. On periods generate strobe sub-reads and the off periods determine the length of the spacing between, known as strobe advance

PacBio Error Correction & Assembly

<http://wgs-assembler.sf.net>

1. Correction Pipeline

1. Map short reads (SR) to long reads (LR)
2. Trim LRs at coverage gaps
3. Compute consensus for each LR

2. Co-assemble corrected LRs and SRs

- Celera Assembler enhanced to support 32 Kbp reads

3. Error corrected reads can be easily assembled, aligned

Celera Assembler

<http://wgs-assembler.sf.net>

1. Pre-overlap
 - Consistency checks
2. Trimming
 - Quality trimming & partial overlaps
3. Compute Overlaps
 - Find high quality overlaps
4. Error Correction
 - Evaluate difference in context of overlapping reads
5. Unitigging
 - Merge consistent reads
6. Scaffolding
 - Bundle mates, Order & Orient
7. Finalize Data
 - Build final consensus sequences

Transcript Alignment

- Long-read single-molecule sequencing has potential to directly sequence full length transcripts
 - Raw reads and raw alignments (red) have many spurious indels inducing false frameshifts and other artifacts
 - Error corrected reads almost perfectly match the genome, pinpointing splice sites, identifying alternative splicing
- New collaboration with Gingeras Lab looking at splicing in human

Assembly Forensics

Computationally scan an assembly for mis-assemblies.

- Data inconsistencies are indicators for mis-assembly
- Some inconsistencies are merely statistical variations

Mis-assembly types

Basic mis-assemblies can be combined into more complicated patterns:
Insertions, Deletions, Giant Hairballs

Mate Evaluation

- Correct: mates have expected orientation and separation

- Mis-assembled: mates have incorrect orientation and separation

- Slightly compressed/expanded mates are expected because mates are sampled from a distribution of fragments

Compression/Expansion Statistic

Library size distribution

Mean: 4000, SD: 400

8 inserts: 3kb-6kb

Local Mean: 4048

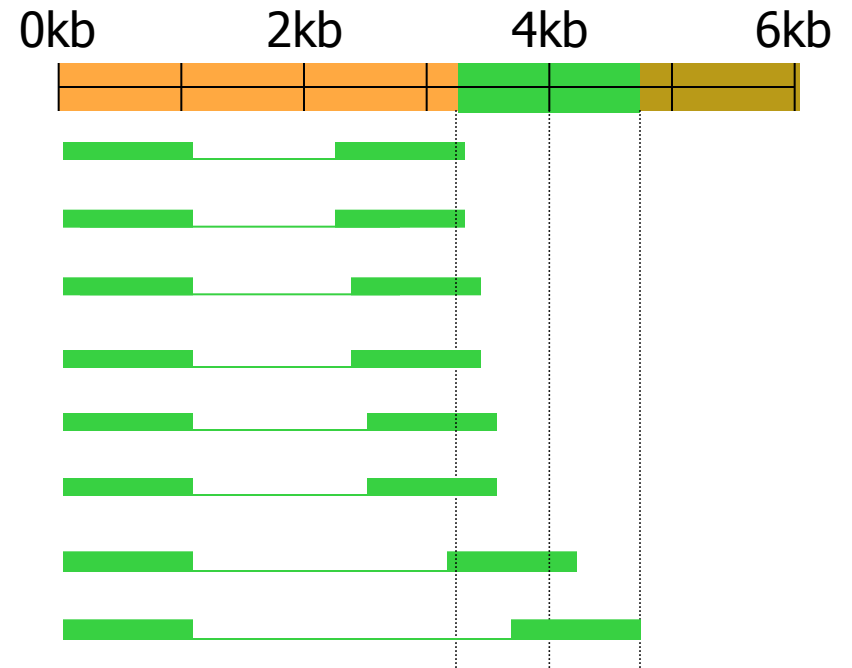

$$\text{C/E Stat: } \frac{(4048 - 4000)}{(400 / \sqrt{8})} = +0.33$$

Near 0 indicates overall happiness

Hidden Compression

Library size distribution

Mean: 4000, SD: 400

8 inserts: 3.2 kb-4.8kb

Local Mean: 3488

$$\text{C/E Stat: } \frac{(3488 - 4000)}{(400 / \sqrt{8})} = -3.62$$

C/E Stat \leq -3.0 indicates Compression

Summary

Assembly is a powerful tool for analyzing sequences, and is moving to increasingly more complex genomes and data types.

- Microassembly is a powerful tool needed to fully understand the genetics of autism and other diseases.

- A global analysis of the genome requires new statistics and computational methods to understand the patterns that we observe.

- Metassembly lets us maximize connectivity without sacrificing the quality of a de novo assembly.
